## Soter RS™

### The ultimate substitute for strip searching

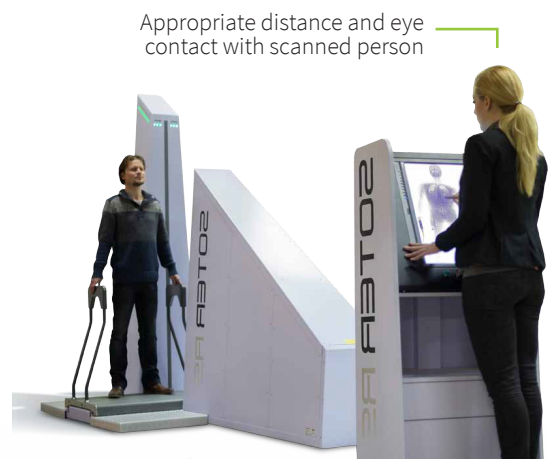

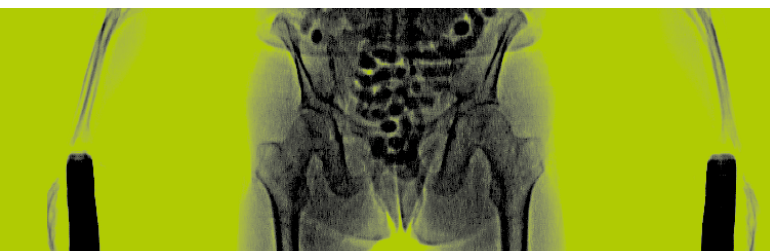

Ensuring a safe environment for personnel, prisoners and visitors is an essential daily routine. Managing the risk of contraband (be it drugs, weapons, mobile phones or other items) is a constant challenge. To date, strip searching, with it's associated risks, has been the only method. There is another safer, more effective solution.

#### The ultimate substitute

FutureScan Ltd offers the **Soter RS Through Body Scanner** as the perfect adoption of proven technology to replace strip search procedures. Human behaviour during a search can be unpredictable, but with the **Soter RS Through Body Scanner**, contraband can be identified safely and more effectively. The result is an instantaneous, high-quality head-to-toe body scan: a 100% screening of the person in question.

#### Contraband can be identified safely and more effectively

The **Soter RS** not only reveals all sorts of metal and plastic, but also organic material. Our body scanner supplies full HD plus images by and for your staff.

The extensive possibilities for analysis easily detect a wide range of contraband.

Keeping ahead of technology today

Provider of mission critical systems & devices to prisons worldwide since 2007

## High quality

The **Soter RS** will substantially save your security process time. We can also provide the machine with an additional operating console, which speeds up throughput time.

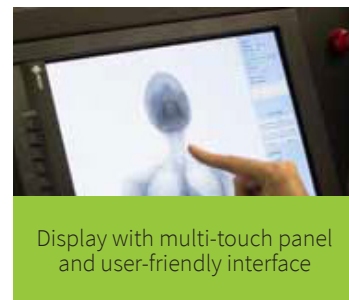

The **Soter RS** is compact and extremely user-friendly: there is no need for extensive training. The high quality scan image is achieved with a minimum amount of radiation and is not harmful.

FutureScan Ltd is familiar with the legislation and supports the application of licences. The **Soter RS** is delivered with clear test protocols and reports on how to use and install them.

We support you in aiming for maximum security for your personnel, your visitors and prisoners.

## A safe, more effective daily procedure

### Certified and specialised

The **Soter RS** is manufactured in the Netherlands by OD Security. Manufacturing is set up according to the modern principles of high-tech production. OD Security is ISO certified and has close partnerships with research institutes and specialised companies. The main objective for OD Security is to constantly improve the technology and always look for better solutions through sophisticated use of high-tech features.
